

# Deepwatch Managed Security Solutions for Healthcare

## Proven Cybersecurity Services for today's Healthcare Delivery Organizations (HDOs)

Deepwatch Managed Security Solutions helps secure healthcare organizations by finding and mitigating cyber-attacks that threaten operations, patient care and patient data. Deepwatch leverages its SecOps platform backed by a world-class team of security experts who monitor, detect, and respond to threats 24/7/365. Deepwatch extends healthcare security teams and proactively improves cybersecurity posture via its Squad Delivery and Deepwatch Secure Score improvements. Many of the world's leading brands rely on Deepwatch's managed security services for 24/7/365 protection and defense against today's increasing security risks.

### Managed Detection & Response (MDR)

Manage security risks across the organization with expert-guided security operations for early detection and automated response to help protect patients and prevent costs from expensive ransomware attacks.

### Endpoint Detection & Response (EDR)

An expanding attack surface brought on by remote work and telehealth initiatives causes more endpoints than healthcare security teams can manage. Get unified visibility, endpoint detection, and remediation with best-in-class EDR technologies that integrate seamlessly with one security platform.

### Vulnerability Management (VM)

Attain comprehensive visibility and risk-based vulnerability prioritization to minimize ransomware exploitation and ePHI data breaches.

### Firewall Management (FW)

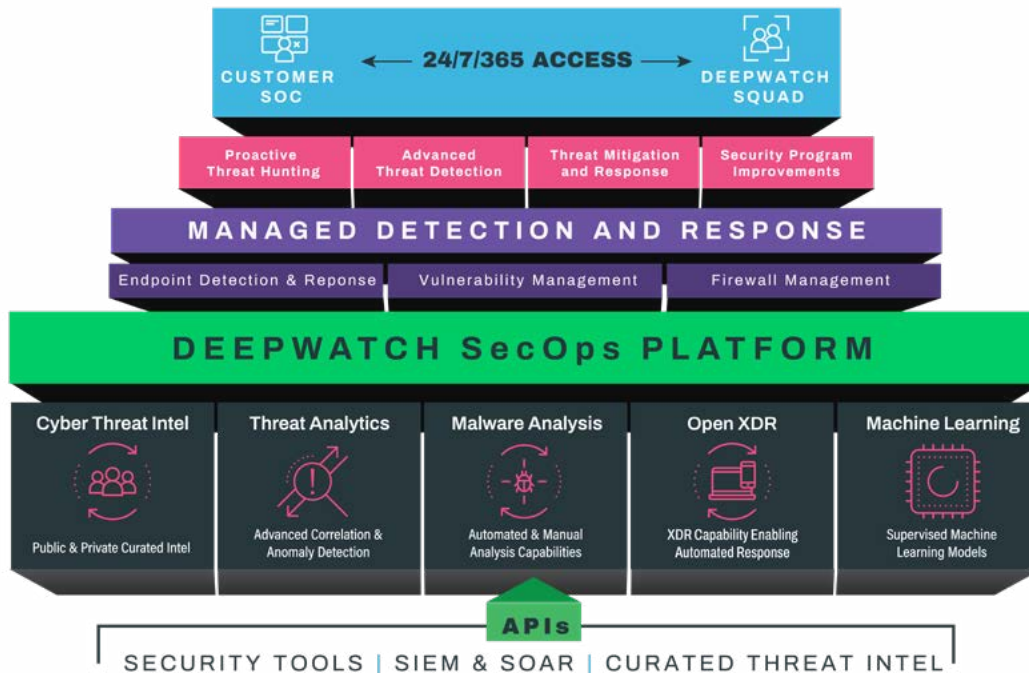

Healthcare has the highest risk from insider threats among all industries. Keep unauthorized users from accessing specific datasets. Gain rapid response to network and perimeter threats, continuous tuning and policy updates for firewalls, and strategic guidance by security experts.

## Trusted Security for healthcare organizations of any size

Built on Deepwatch's SecOps platform, Deepwatch Managed Security Services deliver end-to-end intelligent threat monitoring, advanced detection, and active response with expert guidance to support availability of clinical operations and to prevent disruption to patient care.

## Established Standards for Compliance

Trust and security are at the foundation of Deepwatch's mission to protect and defend healthcare organizations, users, and patient data. With Deepwatch security services, your third-party compliance, privacy, and reliability is paramount. Deepwatch has met established standards, like the SOC 2 Type 2, and is compliant with many regulations, including PCI-DSS and HIPAA. Our services are delivered with security and trust as priorities in order to meet the requirements of our customers.

### Why Partner with Deepwatch for Healthcare Managed Security?

Experienced in serving the healthcare industry, Deepwatch protects against disruption to patient care; protects sensitive ePHI patient data from ransomware; and clearly shows maturity and ROI to clinical boards for funding requests.

Deepwatch's U.S.-based Squad model leverages global threat intelligence along with organic threat intelligence from Deepwatch labs and threat hunting for accelerated threat detection and coordinated incident response. By integrating with best-in-class Managed Detection and Response, Endpoint Detection and Response, Vulnerability Management and Firewall solutions, Deepwatch's Security Operations platform can enable active response to contain and remediate the threats.

Deepwatch customers have experienced greater than 430% ROI on their investment with over 98% reduction in false positives enabling them to focus on strategic initiatives. Working closely with Deepwatch squads and relying on experts who know their environment 24/7/365, customers have been able to improve their security maturity by more than 40% YoY.

**“Deepwatch was the only MSSP that had the right mix of capabilities and flexibility for Premise Health.”**

Jim Hofstee, AVP Security Assurance & Operations, Premise Health
